

Draft Policy ARIN-2022-13:

Clean-up of NRPM Section 2.10

Chris Woodfield, ARIN AC

Draft Policy ARIN-2022-13

Shepherds: Chris Woodfield, Alicia Trotman

History:

[Proposal](#)

9 August 2022

[Draft Policy](#)

23 August 2022

Draft Policy ARIN-2022-13

Current Text (23 August 2022)

Problem Statement:

This proposal continues the work that the ARIN AC NRPM Clean-up Working Group undertook to conduct an editorial review of the NRPM. It relates specifically to Section 2.10. The focus of this proposal is to both clarify and simplify the wording of the section.

Policy Statement:

Replace the existing text: “The term End Site shall mean a single structure or service delivery address, or, in the case of a multi-tenant structure, a single tenant within said structure (a single customer location).” With the new text: “An End Point is the smallest non-divisible physical or virtual point in a network requiring IPv6 address space.”

Draft Policy ARIN-2022-13

Current Text (23 August 2022)

- **Timetable for Implementation:** Immediate
- **Comments:**
 - This proposal is intended to replace ARIN-prop-305 in part, but is not considered strictly editorial in nature.

Draft Policy ARIN-2022-13

Questions for the Community

1. Does the new language sufficiently describe IPv6 allocation use cases not captured in current policy, such as virtual allocations?
2. Are there use cases that the proposed language does not capture that it should?
3. Would the community propose alternate language to capture these use cases that may be clearer than the proposed text?

Any Questions
