Verify your registration information is accurate. Make sure either the Admin or Tech POC is linked to your ARIN Online account. Make sure your Org ID reflects your organization’s current legal name.

If you don’t need additional IPv4 addresses, you’re done!

I need IPv4 address space and I already have a Source confirmed.

Obtain IPv4 pre-approval (OPTIONAL)
- Make sure to ask for your full 24-month need
- Attach documentation that supports your 24-month need
- Even if you’ve already found a Source, a pre-approval will confirm you quality to receive addresses and allow you to complete future transfers without justification.

Submit an 8.3 Source request
- The Source organization will need to submit an 8.3 Source request.
- If you need a status update regarding the progress of the Source request, you would contact the Source directly.

Find an IPv4 Source (OPTIONAL)
- There are two helpful options that ARIN provides, but we do not require that you must use either.
- Contact a transfer facilitator
  ARIN does not evaluate the performance of facilitators and cannot recommend one in particular.
- Use ARIN’s STLS
  Requires a separate $50 fee and allows you to see information for participants with available IPv4.

But what if...
I need additional IPv4 addresses and haven’t yet fulfilled my 24-month pre-approval? Go to:
Find an IPv4 Source
Submit an 8.3 Source request
- Notarized officer acknowledgement will be required.
- The Source organization will need to submit an 8.3 Source request.
- If you need a status update regarding the progress of the Source request, you would contact the Source directly.

If you don’t need additional IPv4 addresses, you’re done!

Other Frequently Asked Questions

How can I make sure I qualify for the size IP block I want to obtain from a third party before signing a deal?
You may wish to request a transfer pre-approval before submitting your 8.3/8.4 transfer request.

The pre-approval I received didn’t sustain my 24-month growth. Can I request a new pre-approval before the 24-month period ends?
Absolutely, you may request a new pre-approval at any time. You do not need to wait 24 months.

Can I still get on the IPv4 Waiting List if I don’t want to transfer IPv4s?
Yes, ARIN is still accepting IPv4 requests and will review them for placement on the IPv4 Waiting List.

I just need a small block of IPv4 addresses for transitioning from IPv4 to IPv6. Is there anything that can help?
Absolutely. The ARIN community enacted policy (NRPM 4.10 Dedicated IPv4 block to facilitate IPv6 Deployment) which set aside a dedicated block of IPv4 addresses specifically to facilitate IPv6 deployment. Organizations that meet the policy guidelines may request up to a /24 for their IPv6 transition.

What about Exchange Points and Critical Internet infrastructure?
The ARIN community enacted policy (NRPM 4.4 Micro-allocation) which reserved IPv4 address space specifically for this purpose. Micro-allocations are issued for critical infrastructure providers of the Internet, including public exchange points and core DNS service providers.
