DNS-OARC

RPKI origin validation visibility for Check My DNS

Keith Mitchell
DNS-OARC

OARC's Mission

The Domain Name System Operations Analysis and Research Center (DNS-OARC) is a non-profit, membership organization that seeks to improve the security, stability, and understanding of the Internet's DNS infrastructure.*

DNS-OARC's mission is to:

- promote and conduct research with operational relevance through data collection and analysis*
- offer useful services and tools*
- build relationships among its community of members*
- facilitate an environment where information can be shared responsibly*
- enable knowledge transfer by organizing open workshops*
- increase public awareness of the DNS's significance*

** including in-addr.arpa !*

**OARC's
117 Members**

Software Projects

- 2019 ARIN grant funded the development and maintenance of many of our open-source DNS tools
- 2020 ARIN grant funded the development of an RPKI Origin Validation visibility test to our existing “CheckMyDNS” tool
 - allows Internet end-users to verify if the DNS resolver they are using is in IP address space which is RPKI validated
 - <https://www.arin.net/resources/manage/rpki/>

Check My DNS

- <https://cmdns.dev.dns-oarc.net/>
- Framework for many types of test that can be performed between end-user and OARC custom test nameserver
- Run from user's browser, gives graphical summary with drill-down results of various tests
 - e.g. transport support, source port randomization, protocol features
 - “Achievements” badges for RPKI v4 and v6 support

Check My DNS

Why RPKI Validation ?

- The Internet needs both secure routing and stable DNS to operate robustly
 - RPKI is part of this
- This is where ARIN and OARC's public benefit missions have common cause 😊
- Aim was to make RPKI Origin Validation check as visible as possible in a user-friendly way
 - built on existing command-line prototype
- Raise awareness of value of RPKI, and help with infrastructure testing/diagnosis/debugging

RoA Beacons

- RPKI tester relies on presence of these to perform validation
- Originally set-up on voluntary basis by Job Snijders while at NTT
- These are now provided by RIPE NCC, thanks to some help from Willem Toorop at NLnet Labs
- It would be great if other (e.g. RIRs) could also operate RoA Beacons
