

ARIN 2014-6

**Remove Operational DNS Text
(was: Remove 7.1)**

Rob Seastrom

Problem Statement

- 7.1 and 6.5.6 attempt to assert rules on rDNS management at ARIN.
- These are technical operational details not numbers policy.
- Perhaps better reflected in a (more detailed, more approachable, and more easily revised) current practices document.

Feedback received

- Original version of this proposal addressed only 7.1
- Previous community discussion focused on “why not 6.5.6 as well?”
- Revised proposal treats IPv6 and IPv4 the same, proposes getting rid of rDNS language in the NRPM for both.

Policy Statement

Remove 7.1. Remove 6.5.6.
