Mechanism of Change

Offers an “or” to existing 8.3 and 8.4 qualifying criteria:

Apply regular qualification policy to the transfer request

OR

If using 80% of all IPv4 holdings (in aggregate), then qualify for up to double your holdings (/16 max).

Utility of Change

116 successful 8.4 transfers at ARIN in 2016 through the end of August:

- 112 would *potentially* fit under the policy (97%)
- 4 would not

516 successful 8.3 transfers at ARIN in 2016 through the end of August:

- 500 would *potentially* fit under the policy (97%)
- 16 would not

Discussion

- Is this policy “fair and impartial” if big guys have to undergo needs justification and everyone else doesn’t?
- Do you prefer this policy over 2015-7, 2016-4 and 2016-5?
