

Current Policy

From policy proposal 2003-3 (and NRPM sections 4.2.3.7.6. and 6.5.5.1.):

An organization with downstream residential customers may substitute that organization's name for the customer's name, e.g. 'Private customer - XYZ Network', and the customer's street address may be replaced with 'Private Residence'. Each private downstream residential reassignment must have accurate upstream Abuse and Technical POCs visible on the WHOIS record for that block.

Current Policy

From policy proposal 2003-3 (and NRPM sections 4.2.3.7.6. and 6.5.5.1.):

An organization with downstream residential customers may substitute that organization's name for the customer's name, e.g. 'Private customer - XYZ Network', and the customer's **street address** may be replaced with 'Private Residence'. Each private downstream residential reassignment must have accurate upstream Abuse and Technical POCs visible on the WHOIS record for that block.

Interpretation of 2003-3?

Earlier version(s) of proposal 2003-3 used the words "residential address information".

"Residential address information" appears in minutes of ARIN XI (Memphis).

Only two PPML messages mentioned that city/state/zip could not be suppressed.

From PPML: "The purpose is to protect individuals' privacy, specifically name and home address."

"My mother's name and address should not be listed in the ARIN database."

2006-1 v. 2003-3 (and NRPM sections 4.2.3.7.6. and 6.5.5.1.):

An organization with downstream residential customers may substitute that organization's name for the customer's name, e.g. 'Private customer - XYZ Network', and the customer's ~~street entire~~ address may be replaced with 'Private Residence'. Each private downstream residential reassignment must have accurate upstream Abuse and Technical POCs visible on the WHOIS record for that block.

2006-1 v. 2003-5 (and NRPM section 3.2)

The service may allow for privacy protections for customers. For residential users, the service may follow ARIN's residential privacy policy ~~that includes displaying only the city, state, zip code, and country.~~

2006-1

An organization with downstream residential customers may substitute that organization's name for the customer's name, e.g. 'Private customer - XYZ Network', and the customer's entire address may be replaced with 'Private Residence'. Each private downstream residential reassignment must have accurate upstream Abuse and Technical POCs visible on the WHOIS record for that block.

NRPM Section 3.2 on Distributed Information Server Use Requirements (from policy proposal 2003-5) is also updated by striking the words "that includes displaying only the city, state, zip code, and country".

Q: Is this proposal acceptable?
