

AC On-Docket Proposals Report

John Sweeting
Advisory Council Chair

AC Docket

- Proposals
 - AC adds to docket, or abandons
- Proposals On Docket
 - Developed by AC and brought to list and PPM as Draft Policy
 - Or perhaps not yet due to:
 - Prioritization (deferred a couple proposals)
 - Time constraints

Proposals on AC's Docket

- Four Proposals still on docket:
 - 95: Customer Confidentiality
 - 97: Waiting List for Unmet IPv4 Requests
 - 98: Last Minute Assistance for Small ISPs
 - 99: /24 End User Minimum Allocation Unit

Proposal 95

- PP 95: Customer Confidentiality
 - Proposal would require ISPs to provide only their customer's names on reallocations and reassignments, while giving the ISP the option of providing their own address and phone number.
 - If requested by ARIN, full customer contact information must be provided. Such information will be kept confidential and not be published in WHOIS.

Proposal 97

- PP 97: Waiting List for Unmet IPv4 Requests
 - Proposal would alter ARIN's current address issuing procedures and instead require the issuing of a single, contiguous address prefix for each approved IPv4 request.
 - Would create a waiting list for requestors whose IPv4 address needs cannot be fulfilled by ARIN at the time of approval of the request.
 - Tries to prevent gaming the intent by forbidding requestors from making multiple small requests.

Proposal 98

- PP 98: Last Minute Assistance for Small ISPs
 - Proposal would reduce the initial ISP minimum prefix size (NRPM section 4.2.2) from /20 to /23 in stages, based on utilization of ARIN's last /8:
 - 90% use of /8 - Minimum is /21
 - 95% - /22
 - 97% - /23
 - Proposal applies to the last /8, not transfers.

Proposal 99

- PP 99: /24 End User Minimum Allocation Unit
 - Proposal would lower the multi-homed end user minimum prefix from /22 to /24.
 - If an end user requests additional address space, they would have to return the smaller prefix for a larger one (for example, a /24 would have to be returned for a /22).

Going Forward

- Your feedback is appreciated
 - Good discussion at the round tables this week!
- AC to work these with the goal of developing these proposals into Clear, Technically Sound, and Useful policy

Thank you
